

1. I am extremely involved on campus. I joined the Delta Gamma sorority and have already gotten involved in my short time in the chapter. I was elected by the chapter to the Junior Panhellenic Position, where I meet with freshman from the other sororities and organize events on campus. I was also recently elected to the positions of Director of Committees and Director of Funds. These positions are a large responsibility and let me prove that I am capable of being reliable and can manage my time. Another way I am involved is through the Tulsa Energy Management Student Association. I recently switched my major to energy management, so this student association has given me the ability to connect with other students in this field and get a better feel for this career path. In the future I plan on running for leadership positions so I can be more involved in the organization. The last club I am involved in is Russian Club. I have taken Russian since middle school, and it has become a passion of mine. Being in this club allows me to meet with other students with the same interests as me and further develop my language skill. I am also planning on applying for many opportunities on campus in the future, including University Ambassador and the Future Alumni Council.
2. I am currently working an on-campus job as an Annual Giving Associate 8-12 hours a week. I communicate with alumni by calling to update information, ask about their experience on campus, and ask them to donate to the Annual Fund. This fund goes directly back to the students to help improve student experience.
3. This is my first semester in the program, so I just recently joined the Student Association. I plan on attending all meetings, attending any events they hold, and joining their intermural team. During the next elections, I plan on running for a leadership position in the association.
4. I found out about the energy management through one of girls in my sorority, Madison Dean. She was a senior in the program and had great success. My major coming into college was petroleum engineering, but after being in the classes I realized it was no longer the right fit for me. After talking to Madison about her experience in the program, I realized it matched my skill set much better. This is my first semester in the program, and my classes are going very well. I am much more passionate in my classes, and it is showing in my grades. I want to become a landman because the energy industry has always fascinated me. Especially with the direction our society is going, the energy industry will be more important now than ever before.
5. When asked what a landman is, I say that they are the front person of an oil and gas exploration team. They interact and negotiate with landowners to purchase land or contract leases so their company can own the mineral rights. It is important a landman has good interpersonal skills because often the impression they leave is the impression of the entire company. A landman is also exposed to many areas, including business, law, economics, and geology.
6. Approximately half of my tuition is being paid by scholarships received from the University of Tulsa. I have received scholarships from the Bainbridge Civic Club, Bainbridge Police Department, and the Geauga County Farm Bureau. The rest of my tuition for this semester was paid by my parent's savings. The upcoming semester will be paid for from any money I have saved and student loans.
7. I have not held any internships in the field because I recently switched majors, but I am still actively applying for opportunities summer. If I am not able to have an internship, I plan on studying abroad in Italy instead.
8. Upon graduating, I plan on becoming a landman. I am very personable and enjoy business so I believe that this career will be a good fit for me. Once I am able to, I plan on becoming a

certified professional landman. I will succeed in this occupation because of my college experience. I am getting a degree in Energy Management specifically, so I will have the proper education to be successful. I am also interested in getting a minor in another area to widen my learning. I plan on holding internships to get necessary industry experience, including studying abroad and having an internship in Aberdeen, Scotland. I also am involved in many clubs and extracurriculars to build my leadership experience. This is how my college experience will ensure my success in my career.

9. I should receive the Landman Scholarship Trust scholarship because I am dedicated to my schoolwork and am passionate about this career. This scholarship would not only contribute to my college education, but to my future and long-term goals. My education will play a direct role in the success of my future. In the past I have been on the Dean's list and graduated high school in the top 3% of my class, showing that I can rise to the challenge. While in high school, I held two jobs, was president of my 4-H club, volunteered over 500 hours, and took college classes full time while still being able to maintain a 4.39 GPA. With this scholarship, I will be able to successfully complete my education and become a landman.
